

JUHSD Wireless Network Setup Guide

"Bring your own Device" Wireless Network:

The SSID for Students and Staff to onboard their devices, "JUHSD Wireless," which can also be used for guests for an 8-hour duration and a limited speed.

The Captive portal login page will look similar on all devices. Please proceed with logging in with your district username and password. Afterward, your device will be remembered and authenticated for one year.

There is a new unified way for staff, students, and guests to join their personal devices to the JUHSD wireless network. The new system is called Clearpass by Aruba networks. To join you simply connect to the "JUHSD Wireless" SSID and enter your network username and password. Once joined your device will be remembered for one year after which you will be asked to log in again.

Guests can also join from the same SSID by simply clicking on the guest button.

We encourage all staff and students to log in with their network credentials and not use the Guest feature as the Guest access is limited to a much slower speed and will require re-authentication every eight hours.

The old "JUHSD BYOD" and "JUHSD_Guest" SSIDs will be turned off on July 30th, 2021.

Please reach out via the [JUHSD Help Desk](#) if you need further assistance.
